

Eastham & Associates

Engineers - Surveyors - Planners

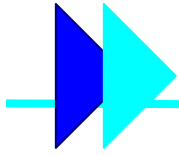

Small Business with Large Capabilities

Eastham & Associates is dedicated to **SAFETY**.

The Safety of each and every employee, our clientele and the public at large is our First and Utmost Concern.

Through the use of mandatory safety training, regular in-house workshops and supplying and or requiring all of the appropriate (PPE) Personal Protective Equipment necessary for particular assignments, we assure every employee has the proper tools to work and live in a Safe environment.

All projects are evaluated for potential hazards and the findings documented and conveyed to each employee involved, prior to arriving at the project work site. We require every employee to stay cognizant of their surroundings, work prudently and constantly evaluate the project work site to immediately reduce, mitigate and report any potential hazards. If any employee believes the work site is unsafe and the potential hazards cannot be immediately reduced or mitigated to safe conditions, all work is suspended and all personnel removed from the work site until such time as the work site is determined to be safe.

SAFETY FIRST

Eastham & Associates is dedicated to **SAFETY**. Our administrative staff conducts weekly safety meetings with our survey field staff and monthly meeting with the entire staff. Prior to commencing work on each site all crewmembers are made aware of certain job hazards related to that particular work site. All Eastham & Associates personnel on site review the Job Hazard Assessment (JHA) completed by Eastham & Associates on Activity Hazard Assessment Form for each project.

The field crew Party Chiefs and Instrument Operators as well as several supervisory personnel stay current with their CPR and First Aid training certifications. Certification updates are normally completed directly through the American Red Cross. All of the Eastham & Associates field crews have at least 2 members that have current CPR and First Aid training certifications, just in case a field emergency occurs.

**American
Red Cross**

have current CPR and First Aid

Nine (9) of the Eastham & Associates field and supervisory personnel have completed the 10 hour OSHA General Industry safety training.

Eastham & Associates has six (6) field crew and supervisory personnel with current OSHA 40 hour HAZWOPER certifications.
